

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

NOTES ON DADE CO. SALIENTIA

During May, 1922, while accompanying Dr. J. K. Small of the New York Botanical Garden on a trip by auto to Cape Sable, Fla., the writer heard the unmistakable rattling call of *Acris gryllus* at different points along the Ingraham Highway, between a point just north of Royal Palm Hammock and a point where the road branches off to Flamingo.

This latter locality is about seven or eight miles northeast of East Cape (Sable), the southernmost point on the mainland of the United States. Other frogs and toads were seen and heard on this trip, as per the following list:

Pseudacris ocularis—heard at Homestead and in rain-ditches along the road—to a little beyond Royal Palm Hammock.

Hyla squirella—saw several in Hammock on shell mound about 5 miles northeast of Cape Sable. Heard their calls at Royal Palm Hammock.

Rana sphenocephala—saw numbers along the shore of the brackish canal on the right of the Ingraham Highway, between Royal Palm Hammock and Cape Sable.

Rana grylio—Heard at Royal Palm Hammock.

Gastrophryne carolinensis—Heard from a ditch beside the road, Royal Palm Hammock.

Bufo terrestris—Singing at Royal Palm Hammock, and in wet places northeast to Homestead.

Bufo quercicus—Heard them “peeping” along the road between Homestead and Royal Palm Hammock.

Scaphiopus holbrookii—ran over one at Homestead, in the evening, on the return trip.

Eleutherodactylus ricordii—Heard this frog, and saw several very small young ones, on the shell mounds in the Hammock about 6 miles northeast of Cape Sable.—RICHARD DECKERT, *Miami, Fla.*
